

WORKSHOP 1

PARSYS TELEMEDICINE

Telemedicine stations in military treatment facilities

At this year's Paris Special Operation Forces - Combat Medical Care Conference, Parsys Telemedicine is excited to present its innovative telemedicine solutions.

Our flagship product, the telemedicine station, is designed to support medical teams in the field by enabling remote medical assistance during emergency situations. This solution makes real-time patient monitoring and direct communication with distant physicians possible, allowing for quicker decision-making and enhanced patient care.

In addition to emergency care, the telemedicine station offers the capability for medical follow-up visits, ensuring continuous patient care even in challenging and remote environments. These solutions are particularly valuable for armed forces, where access to immediate medical expertise can be limited. We will demonstrate how this technology can be a game-changer for military medical teams, providing both lifesaving interventions and ongoing care when it matters most.
