Oct 16th
11:45 – 13:15
Room
Visioconference

Major Haemorrhage Control during Prolonged Casualty Care

- Review different types of haemostats, with particular focus on their mode of action, speed of action, suitability in prolonged casualty care and cold weather environments.
- Learners will have a greater understanding of how different haemostats work, enabling better decision making and helping inform which haemostats offer the greatest clinical benefit.
- Access to the most upto date clinical evidence to support the information presented during the session.
